Preliminary Amendment - First Action Not Yet Received

This listing of claims will replace all prior versions, and listings, of claims in the application.

## **Listing of Claims:**

1-14 (cancelled).

15 (original). A method of deploying a new software feature to a plurality of users, said method comprising the acts of:

setting a throttle value to a first proportion;

selecting a first group of said plurality of users, the number of users in said first group being in about said first proportion to the number of said plurality of users;

providing said feature to said first group;

increasing said throttle value from said first proportion to a second proportion; selecting a second group of said plurality of users, the number of users in said second group being in about said second proportion to the number of said plurality of users, wherein all users in said first group are included in said second group; and

providing said feature to said second group.

16 (original). The method of claim 15, further comprising the act of:

reducing said throttle value from said second proportion to a third proportion; selecting a third group of said plurality of users, the number of users in said third group as compared with the number of said plurality of users being about equal to said third proportion, wherein all users in said third group are included in said second group; and

removing said feature from those users who are in said second group but not in said third group.

17 (original). The method of claim 15, wherein each of said user is associated with an identifier, wherein said throttle value is a number within the range m to n, and wherein said first and second groups of users are selected according to a process comprising the steps of:

converting the identifiers associated with the users to a value in the range from m

Preliminary Amendment - First Action Not Yet Received

to n;

comparing the converted identifiers with the throttle value; and

selecting a user based on the comparison of the converted identifiers with the

throttle value.

18 (original). The method of claim 17, wherein the act of comparing the converted

identifier with the throttle value comprises determining whether the converted identifier is less

than the throttle value.

19 (original). The method of claim 17, wherein the act of converting the identifiers

comprises hashing the identifiers using a hash function.

20 (original). The method of claim 19, wherein said range is 0 to n-1, and wherein said

hash function comprises a modulo n hash function.

21 (original). The method of claim 15, wherein said feature comprises a change in the

location of specified data, and wherein the acts of providing the feature comprise copying data

from one location to another location.

22 (original). The method of claim 15, further comprising the act of:

delaying the determination of whether a given user falls into said first or second

group until a contact is initiated by the given user.

23 (original). The method of claim 15, wherein each of said plurality of users is a user of

a web site that stores customization information for each of the users and provides a customized

version of the web site to each user based on the stored customization information, wherein said

feature comprises migrating the customization data for a user from a client-side file to a common

data store located remotely from each user, wherein the act of providing said feature to said first

group comprises:

Preliminary Amendment - First Action Not Yet Received

copying, from the client-side file to the common data store, the customization data for each user in the first group;

and wherein the act of providing said feature to said second group comprises:

copying, from the client-side file to the customization store, the customization data for each user in the second group for whom the data has not already been copied.

24 (original). The method of claim 23, further comprising the acts of:

setting an indication for each user whose data has been migrated to the common data store; and

maintaining, in a client-side file, a mirror copy of the customization data for each user for whom the indication has been set.

25 (original). A computer-readable medium having computer-executable instructions to perform the method of claim 15.

26-32 (cancelled).
